SUPERSEDED PART NUMBERS

If part 'A' has been superseded by part 'B', the superseding part number "B" will appear in the part number listing with the superseded part number "A" appearing in parentheses immediately following the description.

Example:

Ref. No.	Part	No. Description	Qty
	(Part 'B')	(Part 'A')	
8	123-45678-00-00	CYLINDER(111-12345-00)	1

A part that has been superseded to a kit may be identified by a 99999-00000 part number appearing in the part number column. The old superseded part number will appear in parentheses immediately following the description. Listed directly below the 99999 part number will be those parts making up the kit. The description of the parts making up the kit will be preceded by a small black dot(.) and the description will be indented one letter space.

Example:

Ref. No.	Part	No. Description	Qty
8	99999-12345-00	CYLINDER(111-12345-00)	1
	234-56789-00-00	. HEAD, cylinder	1
	345-67890-00-00	. GASKET, cylinder	1

SIZES

Except for steel balls(ball sizes are indicated in inches), all parts sizes are indicated in millimeters as in the following examples:

Hose(Rubber or Vinyl.....)	Inside Diameter - Length
O-Ring.....	Section Area - Inside Diameter
Washer, Shim, Collar.....	Inside Diameter - Outside Diameter Thickness (Length)

FOREWORD

ASSEMBLIES AND COMPONENT PARTS

Assemblies and their component parts, are identified by an indentation of one letter space, and the description is preceded by a dot (.). If 2 main assemblies are listed, and have the same basic description (i.e.: left and right sides of the same assembly), one will immediately follow the other. If each of these main assemblies is made up of almost the same components, these component parts will be listed immediately under the second main assembly line and will be indicated, as noted above.

If the component is the same for both main assemblies, the quantity indicated will be the total required. If the component is not the same for both main assemblies, the quantity for each separate item will be listed separately.

Examples:

Description	Qty
CARBURETOR ASS'Y, left	1
CARBURETOR ASS'Y, right	1
. JET, pilot	2
. NOZZLE, main	2
. LEVER, starter, left	1
. LEVER, starter, right	1

THE YAMAHA PART NUMBER

The Yamaha part number consists of 12 digits. Each number represents a specific piece of information relating to a replacement part. The following is a guide for reading and interpreting the Yamaha part number.

BASIC PART NUMBER CONFIGURATION:

MODEL CODE NUMBER

FIRST THREE DIGITS . . . **000**-00000-00-00

Every model in each Yamaha product line is assigned a model number to identify that particular model. All component parts are given the model code number relating to the model on which they were first used.

Example: 2K3-00000-00-00 identifies the XS750D.
 2F4-00000-00-00 identifies the GT80E.

BASIC CODE NUMBER

MIDDLE FIVE DIGITS . . . 000-**00000**-00-00

These "Middle Five Digits" indicate the type of part i.e. piston, rings, lower units, etc. The five digits are broken down as follows:

The "Major Classification" indicates the section to which the parts belong, i.e., engine, electrical etc. The "Intermediate" and "Minor Classifications" indicate more specific details.

Example:

DESIGN CODE NUMBER: 000-00000-00-00

The design code distinguishes like component parts from one another when specification differences are involved. For example, distinguishing a standard size piston ring from an oversized piston ring.

Example:

4U8-11610-**0** 0-00 Standard Piston Ring Set for XJ550H
 4U8-11610-**2** 0-00 Oversize Piston Ring Set for XJ550H

FOREWORD

DESIGN CHANGE CODE NUMBER: 000-00000-0 0-00

This code number is used to identify a difference between a new component part and old one when a new part is created by changing the old one.

Example: XJ550H

4U8-11610-0 0 -00 Piston Ring Set, std. - ORIGINAL
4U8-11610-0 1 -00 Piston Ring Set, std. - FIRST DESIGN CHANGE

Only major changes to performance, durability, quality, appearance, cost or interchange ability will affect a part number change.

COLOR CODE & SIZE CODE NUMBER: 000-00000-00- 00

When applicable, the last two digits of the part number identify:

1. Color Code: The painted color or type of plating or surface treatment used on certain parts.
2. Size Code: The last two digits are also used to show the size of parts (mm). Such as the thickness of shims or the size of pistons.

HARDWARE (Fastener) PART NUMBER CONFIGURATION:

TYPE:

A fastener part number always begins with the number "9" followed by either a 0, 1, 2, 3, 4, 5, 7, or 8 designating one of eight major divisions within this group.

Example:

- 9 0 000-00000-00 "0" designates various types.
- 9 1 000-00000-00 "1" designates bolts, cotter pins, etc.
- 9 2 000-00000-00 "2" designates screws, nuts, etc.
- 9 3 000-00000-00 "3" designates oils seals, o-rings, bearings, etc.
- 9 4 000-00000-00 "4" designates spark plugs.
- 9 5 000-00000-00 "5" designates bolts and nuts.
- 9 7 000-00000-00 "7" designates ISO bolts.
- 9 8 000-00000-00 "8" designates ISO screws and nuts.

The only major divisions which the mechanic should become familiar with are those related to the general hardware (nuts, bolts, and washers), since these are the most commonly used and most often replaced items. By knowing how to interpret the part number, the dimensions of a piece of hardware can be determined. This can be very helpful during major engine repair, and general parts replacement.

BOLT EXAMPLE:

EXCEPTION:

It is NOT possible to identify the LENGTH of bolts having a 901 prefix. Only the bolt diameter can be identified with this number.
